

Product Benefits

The eFusion product connects diverse content sources to search appliances, empowering you to search your entire enterprise. eFusion connectors are designed to be fast, flexible, and easy to install, configure and use.

PERFORMANCE Our robust connector technology is optimized to quickly retrieve content while minimizing the impact on networks and underlying content servers and providers. All crawls following the initial crawl are performed as incremental, finding only documents that have changed since the previous pass. eFusion also takes every opportunity to invoke threading for speed, an imperative feature as many of today's content sources have millions of records.

CONFIGURATION All eFusion connectors are designed to be easily configured. The large number of standard options between connectors simplifies configuration because of the options' familiarity. eFusion can be configured to push documents in their native file format or it can extract and deliver the text from over 300 different document types.

TRANSPARENCY eFusion supplies metrics, providing insight into content statistics and performance.

FLEXIBILITY The ability to connect to multiple search appliances and content sources will allow you to dynamically manage your enterprise as you grow and your requirements change.

CONTROL Graphical User Interface (GUI) based administration facilitates integration and connectivity.

CURRENT TECHNOLOGY As search appliance features change and new versions of content interfaces are released, our connectors are updated to match the latest functionality and power.

RELIABILITY eFusion connectors are rigorously tested against the latest search appliance and content management systems to ensure they consistently meet your needs.

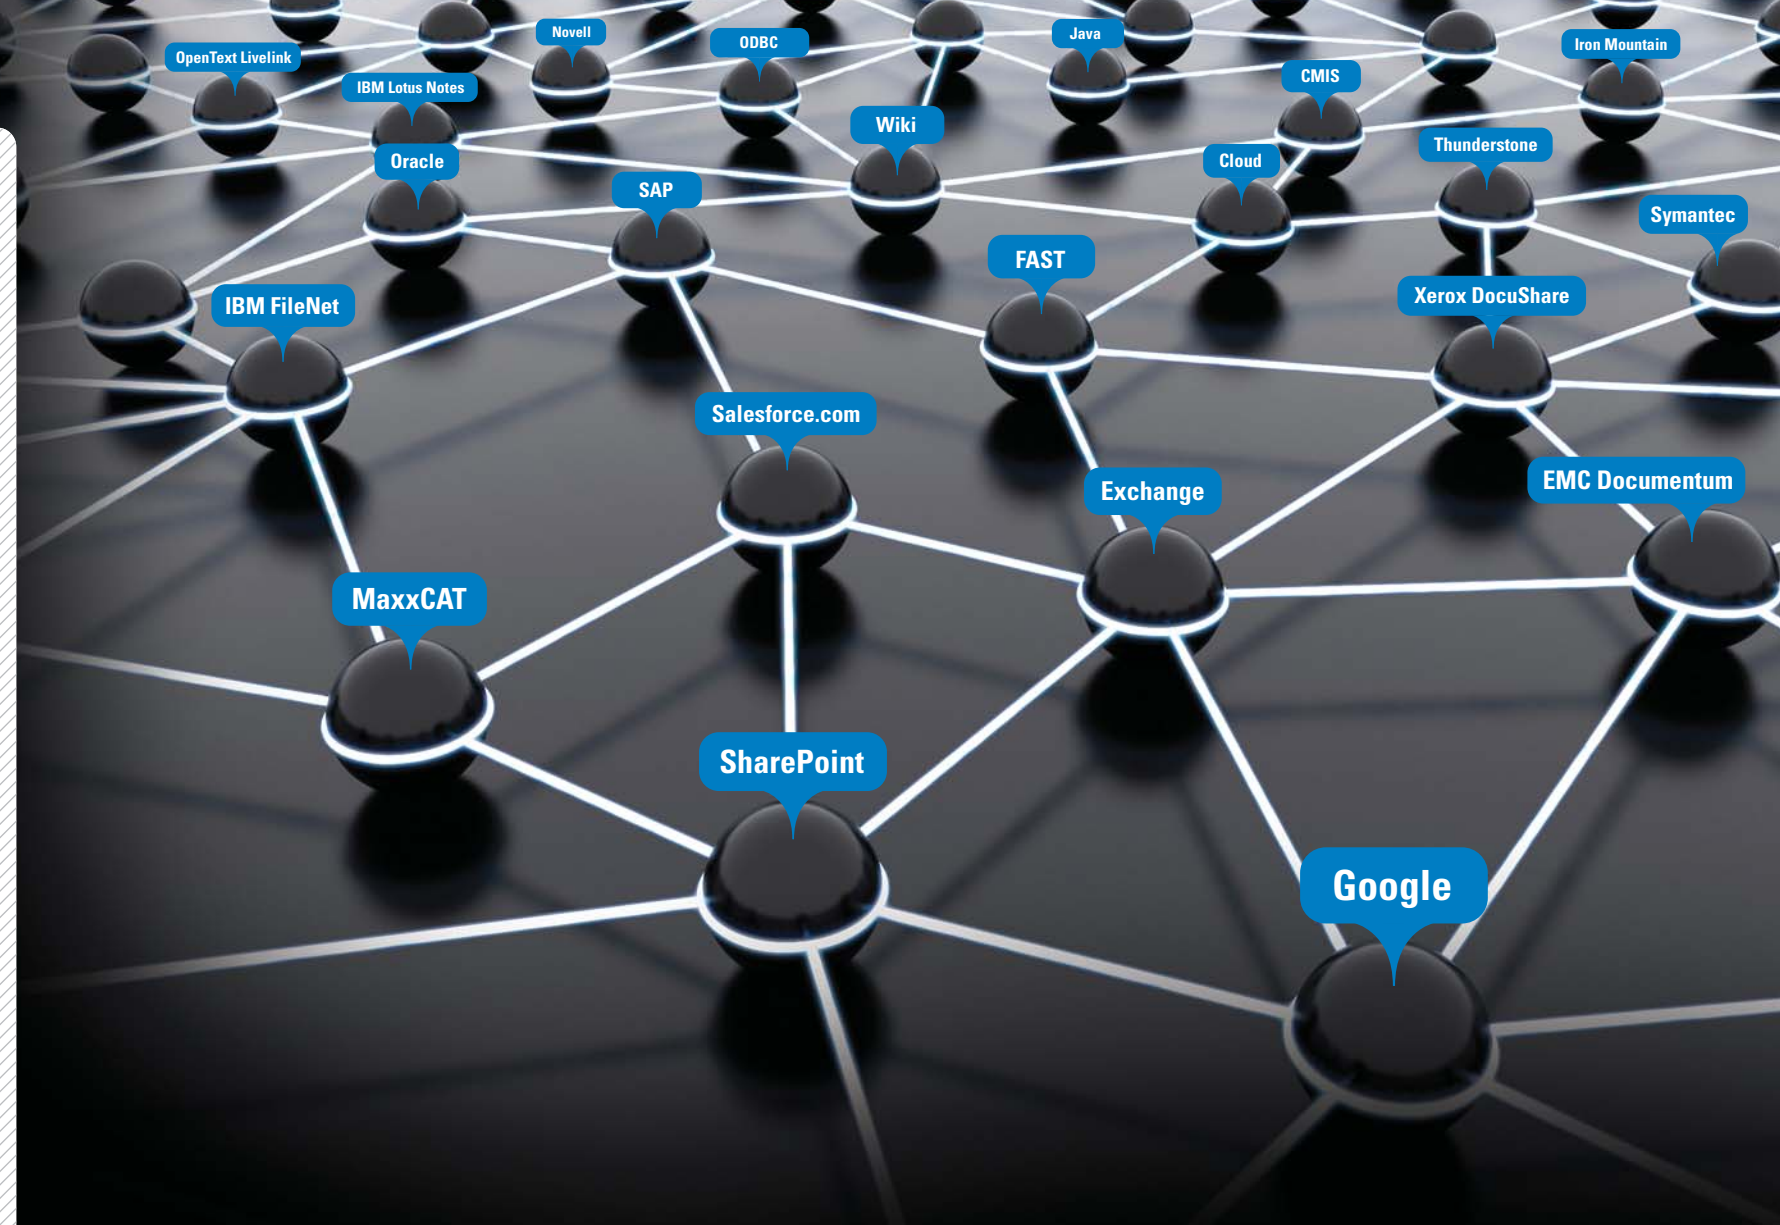

SUPPORT The eFusion product includes help documentation, technical support, and optional custom integration services.

When you partner with Enterprise Data Fusion, you can count on our solid understanding of the content needs of the modern search world.

IN THE MIDST OF ALL THIS TECHNOLOGY...
HOW DO YOU **CONNECT** TO YOUR DATA?

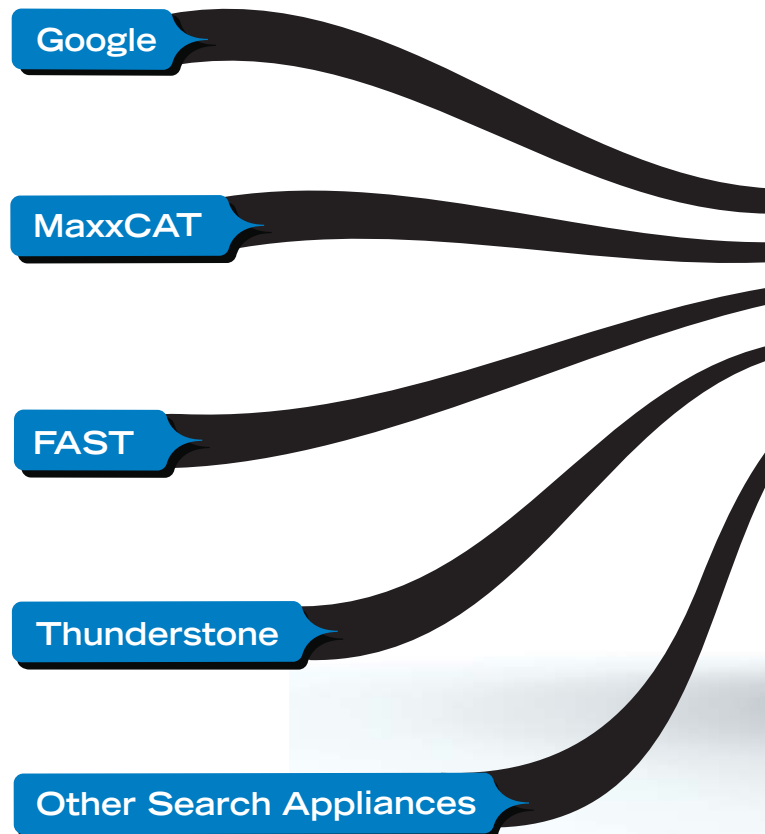

www.edatafusion.com | *Powering Your Connectivity*

The eFusion product is a unique, modular solution that enables clients to connect Content Management, Messaging, Cloud and Collaboration content sources to various Enterprise Search Appliances. Each connector is easily configured to crawl the content system with a focus on incremental crawling and ensuring the original document security is extended to the Search Appliance. eFusion not only fills the upfront need of the client for easy and fast configurability, it also fills the ongoing need for supported, tested and continually updated enterprise-grade connectors.
